SERIAL-NUMBER

Each clip is coded with an individual serial number – marked by laser technology – The serial number guarantees a detailed follow-up of

– the whole production process
– the closure force
– from raw material to the final product

These informations are registered in our company for the period of 10 years.

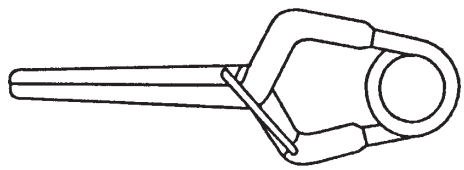

PACKING – LABELING

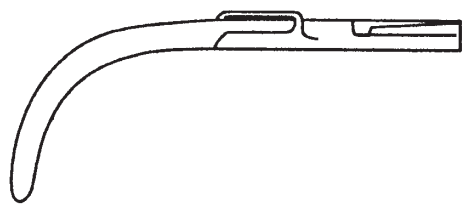

Each clip is individually packaged in a transparent box made of resistant plastic. Special wishes of customers regarding the packaging will be considered by us. This will be marked on an internal instruction.

The transparent box is marked with a label in order to assure a quick and sure identification of the clip.

On the label you can find the following data:

– cataloge number
– Product description
– Illustration
– Closing force in g
– Tolerance range of closing force
– Blade lenght
– Maximum opening
– Blade geometry
– Serial number
– Jaw profile
– Material description
– Lot number
– the notes “NOT STERILE”
– WARNING

Features of the Clip

JAW-PROFILE

The rounded, pyramid-like structure is stamped into the jaw through a special step in production and prevents sharp edged which could perforate an aneurysm

No edges or burrs through additional rounding of structures that border the clip outer side because of this, real atraumatic application of the clip

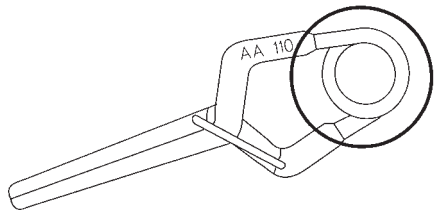

Incrased surface area due to the pyramid-like design of the jaws inner surface the croos-like structure of the inner jaws pyramid surface doubles the tissue-holding area.

The applied pressure distributes itself evenly over the length of the jaw.

The convex closure of the clip assures an atraumatic and secure closure of the aneurysm.

Sliding of the clip is prevented.

SPRING-DESIGN

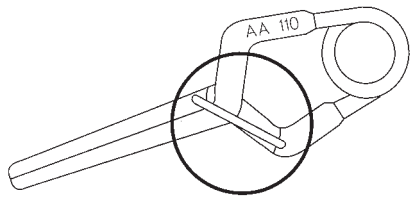

The spring size, wich is different in the Standard and Mini clips, ist the same within the same type of the Clip.

Through this, the highest degree of a secure fit is ensured by the clip applier (clip/clip applier fit)

LINK-DESIGN

Laser welded

The link ensures the precise guidance of the jaws and a “soft” opening of the clip during the whole spreading process.

The contact surface of the jaws are guided symmetrically in an exact way “over the whole lenght” this fact guarantees an aditional stability of the clip.

No over-stress of the material because the design of the link limits the maximum opening width.

Features of the Clip

CLOSING-FORCE

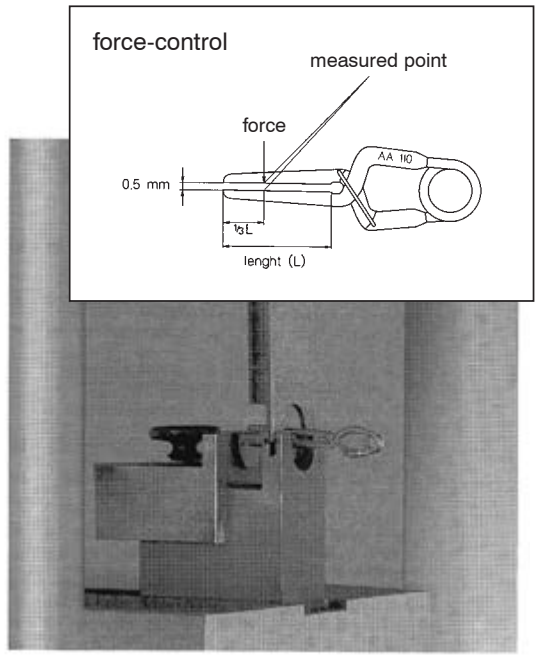

The closing force is measured at one third of the jaw lenght and an opening of 0,5 mm.

The final quality control of the clip is effected by a microprocessor-controlled measuring equipment.

The closing force is indicated exactly within a certain tolerance.

By the help of a special software program we assure that before the clip passes the final quality control its closure force is fixed. As a consequence we exclude any kind of manipulation.

All relevant technical data are stored during the control procedure and printed on the label.

Material and Quality Assurance

According to DIN 17445, implant steel is used in the production of our Aneurysm Clip

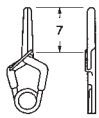

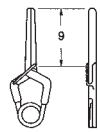

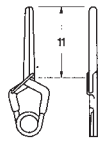

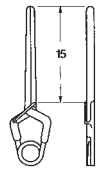

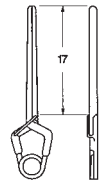

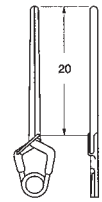

High stability characteristics
Exellent tissue compatibility
Secure closure of blood vessels
Antimagnetic
Ideally suited as implantation material
Security against over straining

für temporären Gebrauch

Maulinnenflächen pyramidenförmig für schonendes, sicheres Festhalten der Gefäße

Der fest eingestellte Schließdruck gewährt risikofreie Anwendung

for temporary occlusion

Blade gripping surface with pyramid-like impressions for save but careful gripping of vessels

No risk due to rigidly fixed pressure measure

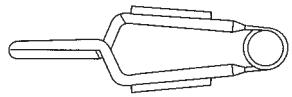

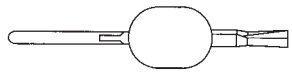

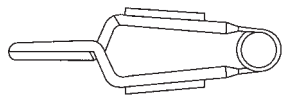

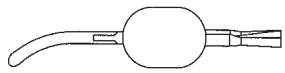

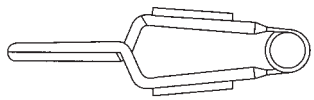

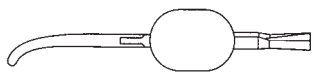

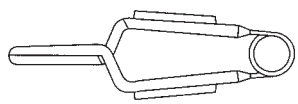

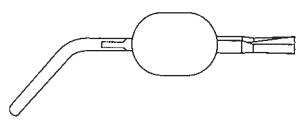

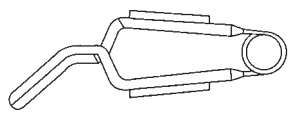

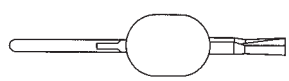

para uso temporal

El interior de las quijadas viene en forma de pirámide para un agarre seguro y cuidadoso de los vasos.

Debido a la calibración exacta de la fuerza de cierre se ofrece una aplicación sin riesgo.

für Mikro-Gefäßanastomosen im oberflächlichem Bereich

Maulinnenflächen schräg gerieft für schonendes, sicheres Festhalten der Gefäße

Der fest eingestellte Schließdruck gewährt risikofreie Anwendung

Der Abstand zwischen den Clips ist durch einfaches Verschieben einzustellen und wird durch Verkanten fixiert

for micro vessel anastomosis in the superficial range

Blade gripping surface with oblique serrations for save but careful gripping of vessels

No risk due to rigidly fixed pressure measure

Adjustable distance between the clips and automatic fixation by tilting

para micro-anastomosis en la superficie

El interior de la quijada viene con estrias finas para un agarre seguro y cuidadoso de los vasos.

Debido a la calibración exacta de la fuerza de cierre se ofrece una aplicación sin riesgo.

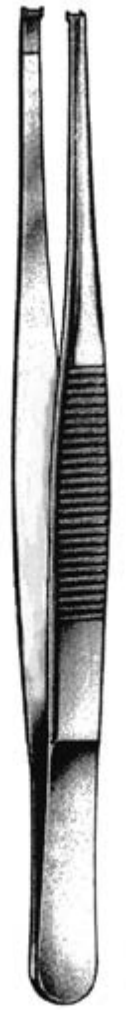

El espacio entre los clips se logra fácilmente por el desplazamiento.

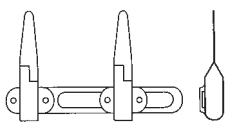

per micro vasi anastomosi sulla parte della superficie

Parte interna del morso è leggermente striata obliqua per ottenere la presa sulla superficie del vaso.

La chiusura regolata garantisce nessun rischio.

Lo scorrimento delle due clips viene regolato con semplice movimento che consente una chiusura ottimale.
